14. Business Impact and Market Potential 19
15. Conclusion and Vision 21

1. Executive Summary

PlaceMate is an AI-powered placement preparation platform designed to transform how students prepare for campus placements and job recruitment. Unlike generic study tools, PlaceMate delivers a fully personalized, company-targeted, and adaptive learning experience that evolves daily based on each student's actual performance.

The platform uses AI to analyze a student's uploaded resume, identify their current skill level, suggest the most suitable companies from a curated dataset, and then guide them through company-specific DSA practice, aptitude quizzes, and performance-based adaptive learning - all delivered automatically via email.

PlaceMate is built by a 9-member team using modern AI tools (Claude API), automation frameworks (n8n), and cloud-based storage (Google Sheets), making it a lightweight, scalable, and demo-ready product within a 3-week development window.

Core Value Proposition:

- Resume-driven, company-specific preparation - not random generic quizzes
- AI-powered evaluation that detects weak areas and adapts daily content
- Fully automated delivery system - no manual effort required after setup
- Progress tracked and reported via end-of-day email notifications
- Scalable architecture suitable for a startup or institutional SaaS deployment

2. Problem Statement

The current placement preparation ecosystem for students is fragmented, unstructured, and highly inefficient. The 5-field problem formula below defines the core challenges this product solves:

Field	Description
Who	Final-year and pre-final-year engineering students preparing for campus placements at mass-recruitment and product-based companies
What Problem	Students prepare randomly with no structured roadmap, no personalized feedback, and no company-specific guidance - leading to poor placement outcomes despite adequate time investment
Root Cause	No existing platform connects a student's current skill profile (from their resume) to company-specific requirements and then continuously adapts their prep based on real performance data
Impact	Students miss placements at companies they are capable of cracking, repeat the same conceptual mistakes, and waste significant preparation time on irrelevant content
Measurable Goal	Within 3 weeks of using PlaceMate, a student should demonstrate measurable improvement in at least 2 weak topic areas, complete company-specific DSA and aptitude practice, and feel confident entering their target company's recruitment process

2.1 Random, Unstructured Preparation

Students prepare without a structured roadmap. They jump between YouTube videos, PDFs, and Leetcode problems without understanding what their specific target company actually expects from candidates.

2.2 No Feedback Loop or Weakness Detection

Students practice but receive no diagnosis. No system tells them what they got wrong, why it was wrong, and what to focus on next. Without this loop, the same mistakes get repeated indefinitely.

2.3 No Company-Specific Personalization

Existing platforms offer one-size-fits-all content. A student targeting Amazon needs a completely different preparation path compared to one targeting TCS or Infosys - yet no tool today bridges this gap intelligently and automatically based on the student's actual resume.

3. Project Overview and Solution

PlaceMate is an end-to-end AI placement preparation agent that takes a student from raw resume to placement-ready performance through an intelligent, automated, and adaptive pipeline.

3.1 Core User Journey

1. Student registers and logs in to the PlaceMate web portal.
2. Student uploads their resume - the AI model analyzes skills, projects, and experience level.
3. PlaceMate recommends the top 6-10 best-fit companies from its curated dataset, ranked by match score.
4. Student selects a target company (e.g., Amazon, TCS, Infosys, Wipro).
5. Platform generates a personalized 3-week prep plan including DSA practice links and aptitude quizzes.
6. Daily quizzes are delivered via email. Student submits answers through Google Forms.
7. Claude AI evaluates responses, identifies weak topics, and adapts the next day's content accordingly.
8. Student receives an end-of-day email with performance summary, weak areas, and motivational message.
9. Progress is tracked in Google Sheets and visible on the student dashboard.
10. (Optional) AI Chatbot handles soft skills and behavioral interview preparation.

3.2 Admin and System Operation

Administrators and team members manage the platform through the following control points:

- Company Dataset Management - Maintain and update company-wise aptitude patterns, DSA topics, and difficulty levels
- Workflow Monitoring - Monitor n8n automation pipelines to ensure quiz delivery and evaluation are running correctly
- AI Prompt Management - Adjust Claude API prompts for evaluation quality and question generation accuracy
- Performance Analytics - View aggregate student performance data across all users for platform improvement
- Content Curation - Add or update DSA problem links mapped to specific companies and difficulty levels

4. MVP Feature List

The MVP features are classified using the MoSCoW prioritization model into three categories: Must Have (core features required for the product to function), Should Have (high-value additions for the MVP demo), and Out of Scope (planned for post-MVP versions only).

4.1 Must Have Features

#	Feature	Description	Owner
1	**User Authentication**	Student registration, login, and secure session management via the React frontend	Arpan Mandal, Aritra Mandal
2	**Resume Upload and AI Parsing**	Student uploads resume - Claude API extracts skills, projects, CGPA, and experience level	Aditya Vatsya, Aditya Raj Singh
3	**Company Matching and Ranking**	AI matches extracted resume skills against company dataset and ranks top 6-10 companies by fit score	Ankita Roy, Abhinav Manohar
4	**Target Company Selection**	Student selects their preferred company from the recommended list to begin their prep plan	Arpan Mandal, Aritra Mandal
5	**Daily Aptitude Quiz Delivery**	n8n workflow sends company-specific aptitude questions to student via Gmail every day	Avijit Bera, Akash Adak
6	**Answer Submission via Google Forms**	Student submits quiz answers through a Google Form linked to the day's quiz email	Avijit Bera, Akash Adak
7	**AI Evaluation and Weakness Detection**	Claude API evaluates submitted answers, assigns scores, and identifies weak topic areas	Ankita Roy, Abhinav Manohar
8	**Adaptive Next-Day Quiz Generation**	System adjusts the next day's quiz content - more focus on weak areas, less on strong ones	Ankita Roy, Abhinav Manohar, Avijit Bera
9	**Google Sheets Performance Tracking**	All scores, weak topics, and improvement trends are stored and updated in Google Sheets	Ankita Roy, Abhinav Manohar
10	**End-of-Day Email Notification**	Automated daily email summarizing performance, weak areas, and a motivational message	Avijit Bera, Akash Adak

4.2 Should Have Features

#	Feature	Description	Owner
1	**Student Progress Dashboard**	React-based UI showing accuracy percentage, weak topics graph, and improvement trends over time	Arpan Mandal, Aritra Mandal
2	**DSA Practice Link Recommendation**	Curated LeetCode, GFG, and HackerRank links mapped to target company and difficulty level, sent weekly	Ankur Mishra
3	**Difficulty Progression Logic**	Aptitude quiz difficulty increases automatically as the student's accuracy improves over consecutive days	Aditya Vatsya, Aditya Raj Singh
4	**Company Data Expansion**	At least 8-10 companies fully mapped with aptitude patterns, DSA topics, and skill requirements	Ankita Roy, Abhinav Manohar

4.3 Out of Scope - Current Version

#	Feature	Reason for Deferral
1	**AI Soft Skills Chatbot**	Requires significant additional prompt engineering and testing - planned for Version 2 if time permits
2	**Mobile Application (iOS or Android)**	Out of scope for the 3-week MVP - can be built post-demo using React Native
3	**Payment Gateway and Subscription Billing**	MVP is free-to-use - monetization features planned for the commercial version
4	**Video or Audio Interview Simulation**	High complexity feature requiring additional AI models - post-MVP roadmap item
5	**Live Company Job Portal Integration**	API access to live job listings requires partnerships - deferred to commercial phase

5. System Architecture

PlaceMate follows a 5-layer architecture that ensures clean separation of concerns, scalability, and easy debugging. Each layer has a specific responsibility and communicates with adjacent layers through defined interfaces.

5.1 Architecture Layers

Layer	Name	Components	Responsibility	Priority
L1	**Data Layer**	Google Sheets, Company Dataset, Resume Storage	Stores student profiles, company data, quiz scores, and weak-area history	Core
L2	**AI Layer**	Claude API, OpenAI API (backup), Gemini API (backup)	Resume parsing, answer evaluation, weakness detection, adaptive question generation	Core
L3	**Logic Layer**	n8n Workflows, Webhooks, Google Forms	Orchestrates the full quiz send - receive - evaluate - update - next-quiz cycle	Core
L4	**Application Layer**	React Frontend, Student Dashboard	Student login, resume upload, company selection, progress visibility	Should Have
L5	**Output Layer**	Gmail, WhatsApp (optional), Telegram (backup)	Delivers daily quizzes, feedback reports, and motivational notifications	Core

5.2 Data Flow Diagram

The diagram below represents how data travels through PlaceMate from the moment a student registers to the delivery of their next-day adapted content. The loop repeats daily for the full duration of the preparation plan.

```
[ Student ]  Registers and uploads resume to PlaceMate portal
                                  v
[ Claude AI ]  Parses resume - extracts skills, CGPA, project
                              experience
                                  v
[ Matching Engine ]  Ranks companies from dataset by skill-fit score
                                  v
[ Student ]  Selects target company from ranked recommendations
                                  v
[ n8n Workflow ]  Generates Day 1 quiz - sends via Gmail with Google
                              Form link
                                  v
```

```
[ Student ]  Completes quiz and submits answers via Google Form
                                   v
[ Claude AI ]  Evaluates answers - scores responses - identifies weak
                                topics
                                   v
[ Google Sheets ]  Updates student record with scores and weak-area
                                flags
                                   v
[ n8n Workflow ]  Sends end-of-day performance email with summary and
                              motivation
                                   v
[ Adaptive Engine ]  Adjusts Day 2 quiz - more focus on weak topics
                            detected today
                                   v
[ LOOP REPEATS ]  Daily adaptive cycle continues for full 3-week prep
                                period
```

6. Technology Stack and Dataset

6.1 Primary and Backup Tool Stack

Component	Primary Tool	Role in Project	Backup Tool(s)	Backup Reason
Automation Engine	n8n	Runs full workflow - quiz send, evaluate, update, next quiz	Make / Zapier	Easier UI, similar capabilities
AI Evaluation	Claude API	Resume parsing, answer scoring, weakness detection, question generation	OpenAI / Gemini API	Highly reliable alternatives
Database / Storage	Google Sheets	Stores student data, scores, weak topics, progress history	Airtable / Firebase	Better UI or real DB for scaling
Communication	Gmail	Delivers daily quizzes, feedback summaries, motivational messages	WhatsApp / Telegram	Higher engagement rate
User Input	Google Forms	Collects student profile, onboarding data, and quiz answers	Typeform / Tally	Better UX or free tier option
Frontend UI	React	Student portal - login, resume upload, dashboard, company selection	Next.js / Glide	Faster build or no-code option
Integration Bridge	Webhooks	Connects form submissions to n8n workflows instantly	Built-in n8n nodes	No external webhook required

6.2 Company Dataset Structure

The company dataset is the core knowledge base of PlaceMate. It is maintained in Google Sheets (with Airtable as backup) and contains structured records for each supported company. This dataset directly drives the quiz generation and company-matching logic.

Company	DSA Focus Topics	Aptitude Pattern	Core CS Subjects	Difficulty Level	Coding Rounds
Amazon	Arrays, DP, Graphs, Trees	Logical + Quantitative	OS, DBMS, CN	Hard	2-3 rounds
TCS (NQT)	Basic Sorting, Strings	Verbal + Quantitative	Basic CS concepts	Easy - Medium	1 round

Infosys	Arrays, Strings, Linked List	Quantitative Aptitude	OOPS, DBMS	Medium	1-2 rounds
Wipro	Sorting, Searching, Stacks	Logical Reasoning	OS, CN basics	Easy - Medium	1 round
Cognizant	Arrays, Basic DP	Verbal + Logical	DBMS, OOP	Easy - Medium	1 round
Accenture	Strings, Arrays	Attention to Detail	Basic CS	Easy	1 round
Capgemini	Pseudo code, Arrays	Gamified Aptitude	OOP concepts	Easy	1 round
HCL	Sorting, Searching	Quantitative	OS, DBMS	Easy	1 round

7. Team Structure and Role Allocation

The 9-member team is divided into 5 focused functional groups. Each group owns a specific layer of the product. This ensures parallel development, clear accountability, and minimal cross-team dependency throughout the 3-week sprint.

Member	Role	Team	Key Tools	Primary Responsibilities
Arpan Mandal	UI Developer	Frontend	React, Tailwind CSS	Login and signup pages, resume upload UI, company selection interface
Aritra Mandal	Frontend Dev	Frontend	React, REST APIs	API integration with backend, student dashboard, progress visualization
Aditya Vatsya	AI Engineer	AI and Analysis	Claude API, Python	Resume parsing logic, skill extraction pipeline, company rank scoring
Aditya Raj Singh	Prompt Engineer	AI and Analysis	Claude API, n8n	Evaluation prompts, weakness detection logic, adaptive question generation
Ankita Roy	Data Engineer	Data and Content	Google Sheets, Airtable	Company dataset creation - skills mapping, DSA topics, aptitude patterns
Abhinav Manohar	Data Analyst	Data and Content	Google Sheets, Webhooks	Matching logic design, performance schema, score tracking data structure
Avijit Bera	Automation Dev	Automation	n8n, Gmail	Full n8n workflow - quiz trigger, AI evaluation, adaptive update cycle
Akash Adak	Integration Dev	Automation	n8n, Google Forms	Form-to-workflow bridge, email templates, end-of-day notification system
Ankur Mishra	Content and Demo	Strategy and Demo	Claude API, DSA sources	DSA link curation, soft skills chatbot prompts, pitch deck, demo flow

8. RACI Matrix

The RACI Matrix defines clear ownership for every project task across all 9 team members. R = Responsible (does the work), A = Accountable (owns the outcome), C = Consulted (input required), I = Informed (kept up to date). Every task has exactly one Accountable owner.

Task / Deliverable	Arpan Mandal	Aritra Mandal	Aditya Vatsya	Aditya Raj Singh	Ankita Roy	Abhinav Manohar	Avijit Bera	Akash Adak	Ankur Mishra
Resume Upload and AI Parsing	R	A	C	C	-	-	-	-	-
Company Matching and Ranking Logic	I	I	R	A	C	C	-	-	-
Company Dataset Creation	-	-	C	C	R	A	-	-	-
n8n Automation Workflow	-	-	C	C	-	-	R	A	-
Google Forms and Sheets Integration	-	-	-	-	C	C	A	R	-
Email Notification System	-	-	-	-	-	-	R	A	C
React Frontend Development	R	A	-	-	-	-	-	-	I
AI Evaluation and Weak Detection	I	I	R	A	-	-	C	C	-
DSA Link Curation	-	-	-	-	C	C	-	-	R
Demo Preparation and Pitch	C	C	-	-	-	-	-	-	R
Integration Testing	C	C	C	C	C	C	C	C	R
Project Documentation	C	C	C	C	C	C	C	C	R

R = Responsible (Blue)

A = Accountable (Red)

C = Consulted (Green)

I = Informed (Yellow)

9. Gantt Chart - 3-Week Timeline

The Gantt chart maps all 16 project deliverables to their owners and weekly schedule. Week 1 focuses on foundation setup, Week 2 builds the core system, and Week 3 is dedicated to integration, polish, and demo readiness.

Task / Deliverable	Week 1 (Days 1-7)	Week 2 (Days 8-14)	Week 3 (Days 15-21)
Project Setup and Environment Config	Active	-	-
Company Dataset Creation	Active	-	-
Frontend - Login and Resume Upload UI	Active	Active	-
AI Resume Parsing and Skill Extraction	Active	Active	-
Company Matching and Ranking Logic	-	Active	-
n8n Workflow Automation Build	-	Active	-
Google Sheets Schema and Integration	-	Active	-
AI Evaluation and Weakness Detection	-	Active	Active
Aptitude Quiz System via Google Forms	-	Active	Active
DSA Link Curation and Company Mapping	-	Active	Active
Email Notification and Reporting	-	-	Active
Frontend Dashboard - Progress View	-	-	Active
Adaptive Quiz Engine - Daily Loop	-	-	Active
AI Chatbot - Soft Skills (Optional)	-	-	Active
Integration Testing and Bug Fixes	-	-	Active
Demo Preparation and Final Pitch	-	-	Active

Active (Dark Blue) = Week 1
Active (Medium Blue) = Week 2
Active (Light Blue) = Week 3
- = Not scheduled that week

10. Risk Register

The risk register identifies 7 potential threats to project delivery, assesses their probability and impact, and defines clear mitigation strategies and backup plans to keep the project on track within the 3-week window.

#	Risk Description	Probability	Impact	Mitigation Strategy	Backup Plan
1	Claude API rate limits or service outage during evaluation cycle	Medium	High	Implement response caching and request queuing in n8n	Switch to OpenAI GPT-4o or Gemini API immediately
2	n8n workflow failure or misconfiguration blocking quiz delivery	Medium	High	Thorough workflow testing before deployment with version backups	Migrate full workflow to Make (Integromat)
3	Resume parsing by AI produces inaccurate skill extraction results	High	Medium	Define a structured resume format for MVP and validate with 10+ test resumes	Provide manual skills input form as a fallback option
4	Team bandwidth constraints and skill gaps delay delivery	Medium	Medium	Weekly sync meetings with fallback members assigned to critical tasks	Reduce scope - defer chatbot and dashboard to post-MVP release
5	Frontend complexity delays core backend and automation work	Medium	Medium	Start with minimal UI and prioritize workflow and AI over aesthetic polish	Use Google Sheets as temporary frontend for demo if needed
6	Email delivery failures due to spam filter blocking	Low	Medium	Configure proper sender authentication with SPF and DKIM records	Fall back to WhatsApp or Telegram for quiz delivery
7	Company dataset insufficient or incomplete for demo presentation	Low	High	Complete at least 6 companies fully in the dataset by end of Week 1	Use clearly labelled simulated data with disclaimer during demo

11. Definition of Done

The Definition of Done (DoD) provides a testable, unambiguous completion criterion for each must-have feature. A feature is only considered complete when its DoD statement can be verified by a team member running a real test case - not just by reviewing code.

#	Feature	Definition of Done - Testable Acceptance Criterion
1	**User Authentication**	A new student can register, log in, and access the dashboard without errors. Session persists across page refresh.
2	**Resume Upload and AI Parsing**	A sample PDF resume is uploaded and the system correctly returns at least 3 extracted skills and experience level within 10 seconds.
3	**Company Matching and Ranking**	After resume analysis, at least 3 companies appear in ranked order with a visible fit score. Ranking changes when resume content changes.
4	**Target Company Selection**	Student selects a company and the system confirms the selection, stores it in Sheets, and displays a confirmation message.
5	**Daily Quiz Delivery via Email**	A test student account receives a quiz email at the configured time containing 5 or more questions with a Google Form submission link.
6	**Answer Submission via Google Form**	Submitted answers are received by the n8n webhook within 60 seconds and correctly passed to the Claude evaluation prompt.
7	**AI Evaluation and Weakness Detection**	Claude returns a score and identifies at least one weak topic from a test submission. Output is stored in the correct Google Sheets row.
8	**Adaptive Next-Day Quiz Generation**	Day 2 quiz contains demonstrably more questions from the weak topic identified on Day 1 compared to the Day 1 quiz.
9	**Google Sheets Performance Tracking**	After completing a quiz, the student's row in Sheets shows updated score, accuracy percentage, and weak topic tags correctly.
10	**End-of-Day Email Notification**	Student receives an end-of-day email containing their score, weak areas flagged, and a motivational message before midnight.

12. Demo Script - 3-Minute Structure

The 3-minute demo script is designed to maximize impact by showing the complete PlaceMate loop - from a student's first login to the adaptive feedback on Day 2. The script follows the Hook - Show - Prove - Ask structure.

Segment	Time	What to Show on Screen	What to Say
Hook	0:00 - 0:25	Slide: 'How many of you prepared for placements but still felt lost?'	'Every student prepares for placements - but most do it randomly. No one tells them exactly what TCS or Amazon actually tests, or where they went wrong yesterday. PlaceMate changes that.'
Problem	0:25 - 0:45	Slide: 3 problems shown - Random Prep, No Feedback, No Personalization	'Three real problems - no structure, no feedback loop, no company-specific guidance. PlaceMate solves all three in one automated system.'
Demo - Login	0:45 - 1:05	Show student login screen and resume upload on the live portal	'A student logs in, uploads their resume - and PlaceMate's AI instantly reads it and tells them which companies match their profile and at what rank.'
Demo - Quiz	1:05 - 1:35	Show the Day 1 email received by student and the Google Form quiz	'The same evening, the student gets their Day 1 quiz - personalized for their target company. They submit answers through this simple form.'
Demo - AI	1:35 - 2:05	Show Claude evaluation output in Google Sheets - score plus weak topic flagged	'Our AI immediately evaluates the answers, scores them, and flags the weak area - say, Dynamic Programming. This gets stored and feeds directly into tomorrow.'
Demo - Adapt	2:05 - 2:30	Show Day 2 quiz email - more DP questions compared to Day 1	'Day 2 quiz arrives - and now it has significantly more Dynamic Programming questions. The system actually learned from yesterday. That is the feedback loop.'
Closing Ask	2:30 - 3:00	Slide: Market size, product roadmap, team photo	'We are a 9-member team. We built this in 3 weeks. The market is 1.5 million engineering graduates every year. PlaceMate is not just a project - it is a product. We are open to questions.'

Key Demo Rules:

- Always show a real working demo - never slides alone. The live quiz-to-evaluation loop is your strongest moment.
- Have a pre-loaded student account with Day 1 already submitted so you can jump straight to the AI evaluation output.
- If live demo fails, have a recorded screen video as backup playing on the same laptop.
- Every team member should know the 3-minute script so any person can present if needed.

13. GitHub Repository Plan

A well-structured GitHub repository ensures clean collaboration, version control, and a professional impression during the demo and evaluation. The repository will be public and maintained with clear documentation and regular commits.

13.1 Repository Structure

Folder / File	Contents and Purpose
/frontend	React application - login, resume upload, dashboard, company selection UI components
/backend	API endpoints, resume parsing logic, company matching algorithm, authentication handlers
/ai-engine	Claude API prompt files, evaluation logic, weakness detection scripts, adaptive quiz generator
/automation	n8n workflow export files (JSON), webhook configuration, email template files
/data	Company dataset (CSV and Sheets export), student schema, sample resume files for testing
/docs	Project documentation PDF, architecture diagrams, data flow diagrams, pitch deck
README.md	Project overview, setup instructions, tech stack summary, demo video link, team members
.env.example	Sample environment variable file - API keys placeholders (no real keys committed)
CONTRIBUTING.md	Branch naming conventions, commit message standards, pull request review process

13.2 Repository Readiness Checklist

- Repository created with meaningful name (placemate or placemate-ai) under a team organization account
- README.md completed with project description, setup guide, demo video link, and team credits
- All team members added as collaborators with appropriate branch permissions
- Main branch protected - all changes go through pull requests with at least one reviewer
- GitHub Actions or basic CI set up to catch build errors on push to main
- No API keys, credentials, or sensitive data committed - all secrets in .env files added to .gitignore
- At least one working release tag created before the demo date for a stable demo build

14. Business Impact and Market Potential

PlaceMate is not just an academic project - it is a commercially viable SaaS product with a clearly identifiable market, measurable value proposition, and a realistic path to monetization and scale.

14.1 Market Opportunity

India produces approximately 1.5 million engineering graduates every year. A significant portion actively prepares for placements at mass-recruitment companies such as TCS, Infosys, Wipro, Cognizant, Amazon, and Accenture. The EdTech market in India was valued at over USD 7.5 billion in 2023 and is projected to reach USD 30 billion by 2031, growing at a CAGR of approximately 17%.

14.2 Target User Segments

- Primary - Final-year and pre-final-year engineering students in Tier 2 and Tier 3 colleges seeking placement in mass-recruitment companies
- Secondary - Diploma students and lateral entry candidates preparing for entry-level technology roles
- Tertiary - Training and Placement (T and P) departments at colleges seeking automated placement preparation infrastructure

14.3 Revenue Model

Model	Description	Target Segment
Freemium (B2C)	Free basic prep with paid premium company-specific plans and advanced analytics	Individual students seeking targeted placement preparation at no upfront cost
Institutional (B2B)	License the full platform to colleges and universities on an annual contract	Training and Placement departments, coaching centers, and educational institutes
SaaS Subscription	Monthly or annual subscription per student or per institution cohort	Large-scale college deployments and online batch preparation programs
API Licensing	License the AI evaluation engine as a standalone API to third-party platforms	EdTech companies, recruitment firms, and HR assessment platforms

14.4 Competitive Advantage

- Most platforms (LeetCode, InterviewBit, PrepInsta) are generic - PlaceMate is company-specific and resume-driven
- The adaptive feedback loop is a genuine market differentiator - no current free tool continuously adjusts content based on daily weakness tracking
- Automated delivery with zero-login daily prep reduces friction significantly, increasing consistent usage over a preparation period
- The soft skills AI coach covers behavioral interview preparation - a dimension that pure coding platforms completely ignore

15. Conclusion and Vision

PlaceMate represents a meaningful step toward solving a real, persistent problem faced by millions of students every year. The current placement preparation ecosystem is fragmented, impersonal, and unresponsive to individual needs. PlaceMate changes that by combining AI intelligence, workflow automation, and company-specific data into a single adaptive platform.

Within three weeks, the team will deliver a functional MVP demonstrating the complete value loop: resume upload, company matching, adaptive daily practice, AI feedback, and measurable improvement. This is not an academic exercise - it is a product with clear commercial viability, a scalable 5-layer architecture, and a design philosophy centered entirely on the student's success.

The broader vision for PlaceMate is to become the go-to placement preparation companion for every engineering student in India - and eventually across Asia - offering a personalized, intelligent, and fully automated path from a student's current skill level to their dream company's offer letter.

15.1 Product Vision Statement

> *"PlaceMate is an AI-driven, company-specific placement preparation system that transforms a student's resume into a personalized daily learning loop - continuously adapting based on performance, eliminating random preparation, and making every study hour count toward landing their dream role."*
